EDUCATION

University of Nevada, Las Vegas

BSE, Electrical Engineering - GPA: 3.98/4.0

Las Vegas, NV
Expected May 2029

Coronado High School

Advanced Honors Diploma - GPA: 4.98/4.0 weighted - Rank 1

Henderson, NV
May 2025

- Varsity Wrestling, Chess Club President, 3x Power Lifting State Records

WORK EXPERIENCE

Sable Systems International - R&D Electrical Engineer

R&D Electrical Engineer intern

North Las Vegas, NV

July 2026 – Present

- Achieved a **97% reduction** in thermal chamber warm-up latency (193 minutes to 4 minutes) via custom **C++ PI control** firmware on **RP2040** with SSR actuation.
- Performed **PCB root cause analysis** and environmental stress testing to qualify sensor telemetry reliability for high precision gas analyzers.

Wrebotics - Project Intern

Electrical Engineer Intern

Las Vegas, NV

June 2025 – August 2025

- Engineered and delivered a production-ready educational kit integrating an Arduino RFID access-control system – deployed as a student-facing product.
- Owned end-to-end component budgeting and vendor sourcing, optimizing BOM cost without sacrificing prototype quality or delivery timeline.

Tether Studios - Quality Assurance

Intern

Henderson, NV

May 2024 – August 2024

- Executed production test cases across mobile game builds, with findings contributing to **50+ bug fixes** and updates pushed to production
- Documented and tracked critical bugs across **30 live mobile game titles**, providing detailed reproduction steps to accelerate developer turnaround.

SKILLS

- Hardware / Lab:** PCB Design & Soldering, Embedded Systems, Electrical Harnessing, Oscilloscopes/Testing, Breadboarding, ESP32, Raspberry Pi, Arduino, Vector Network Analyzer, RTL-SDR - **Programming / Software:** C/C++, Python, LTspice, KiCad, GNU Radio, Excel

STUDENT ORGANIZATIONS

Formula SAE EV - UNLV

Electrical Engineer

Las Vegas, NV

June 2026 – Present

- Dedicate **15-20 hours weekly** assembling and wiring the team's high-voltage battery pack and sourcing components under senior engineer direction.
- Supported battery diagnostic testing by reading and interpreting cell voltage/temperature data through **Orion BMS** software over a **CAN bus** interface.

Student Research and Development - Students for the Exploration and Development of Space (SEDS)

Engine Systems - Data Acquisition Engineer

Las Vegas, NV

June 2026 – Present

- Diagnosed and eliminated intermittent sensor signal dropouts with **EMI shielding** for critical wiring harness exposed to high current transients.
- Integrated a **LabJack T7** DAQ pipeline sampling 5 pressure transducers at 25kHz, implementing a **ring buffer** to eliminate sample loss during high-throughput acquisition on a liquid rocket igniter test stand

PROJECTS

ESP32 IMU Telemetry - Embedded Systems

Personal Project

Present

- Developed a real-time attitude estimation pipeline via **Madgwick AHRS** on **ESP32**, integrating an ESP-NOW wireless telemetry link.
- Designing a custom **PCB** to migrate sensor bus from **I2C to SPI** targeting a **~4x improvement** in data throughput for higher-frequency IMU sampling.

NFC Keychain Venture

Personal Project

- Designed and **3D-printed** NFC-enabled keychains in **SolidWorks**, generating over **\$1,000** in direct sales.
- Partnered with the University of Nevada, Reno to produce a custom-branded "Nevada N" NFC keychain for students and staff.

Multi-Rail Bench Power Supply

Personal Project

- Designed a multi-rail regulated power board (**24V to 12V, 5V, 3.3V**) with a hard-capped 3A current limit, built to replace bench power supplies needed for small scale R&D setups.
